WEB-BASED

FULL PRODUCT CAPABILITY DOCUMENT

Prepared for prospective hospital & clinic partners

Confidential
2026 Edition

A single platform that runs the whole hospital

Adamrit replaces the registers, spreadsheets, and disconnected software that hospitals juggle today with one secure system where the front desk, doctors, labs, pharmacy, billing, accounts, and management all work from the same live data.

Patient → Bill

The full journey, end to end

Multi-Hospital

Many units, one login

Role-Based

Each user sees only their work

Real-Time

Every screen, always current

— THE SOLUTION MAP

16 functional domains, covered in this document

01 Front Office & Patient Access

Registration, kiosk, appointments, queue & TV displays

02 OPD & IPD Operations

Daily dashboards, admitted patients, journey logs

03 Wards, Beds & Accommodation

Room management, shifting, occupancy

04 Clinical & Nursing

Doctor view, treatment sheets, nursing station

05 Operation Theatre & Procedures

OT, Cath Lab, CT/MRI, complications

06 Laboratory (LIS)

Orders, sample tracking, results, QC, delivery

07 Radiology & Imaging (RIS/PACS)

Modalities, worklist, reporting, image viewer

08 Pharmacy & Supply Chain

Billing, inventory, purchase, GRN, returns

09 Billing & Invoicing

Final bill, advances, discharge, scheme bills

10 Accounting & Finance

Vouchers, ledgers, balance sheet, P&L, GST

11 Corporate & TPA

Submission, approvals, aging, bulk receipts

12 Government Schemes

CGHS, PMJAY/MJPJAY, ESIC, Ayushman panels

13 Marketing, Referrals & B2B

Field tracking, incentives, partner portal

14 Master Data & Configuration

All catalogs, panels, rates & rules

15 Administration & Security

Users, roles, attendance, audit logs

16 Dashboards, Reports & Integrations

Director KPIs, Tally sync, telephony, QR

The hidden cost of disconnected systems

Most hospitals don't lose money in one big way — they lose it in a hundred small leaks between departments that never share the same data. Adamrit closes each one.

Running on registers & silos

The everyday reality without a connected system

- ✗ **Revenue leaks** — medicines, consumables, and scans get delivered but never reach the bill.
- ✗ **Slow discharges** — final bills are assembled by hand from scattered slips, holding beds for hours.
- ✗ **Claim rejections** — CGHS/PMJAY/ESIC packages priced wrong, documents missing, money stuck for months.
- ✗ **No live visibility** — directors learn the month's numbers weeks after the month has ended.
- ✗ **Stock & expiry losses** — pharmacy write-offs nobody saw coming.
- ✗ **Reconciliation pain** — billing, accounts, and Tally never quite agree.

Running on Adamrit

One system, one source of truth

- ✓ **Every charge captured** — each service posts to the visit bill the moment it's delivered.
- ✓ **One-click discharge bills** — assembled automatically from real activity, ready in minutes.
- ✓ **First-time-right claims** — built-in scheme rates, package codes, and auto-generated documents.
- ✓ **Live director dashboard** — revenue, occupancy, and referrals update as they happen.
- ✓ **Batch-level stock control** — expiry alerts, low-stock alerts, full movement audit.
- ✓ **Books that tie out** — billing flows into double-entry accounts and syncs to Tally.

The areas Adamrit is built to move

Revenue leakage — charges captured at the point of service, not reconstructed later

Discharge time — bills ready on demand instead of hand-totalled at the counter

Claim rejections — scheme rates & documents correct before submission

Cash visibility — outstanding, aging & daily revenue, live

Directional outcomes that depend on each hospital's current process. We size the specific opportunity for your hospital during the demo.

From the front gate to the ward

Every patient touchpoint before clinical care begins — registration, scheduling, queueing, and the in-patient accommodation that follows admission.

01 Front Office & Patient Access

RECEPTION

The front desk's complete toolkit — register, schedule, and route every patient, with kiosk self-service and live queue displays for the waiting area.

- **OPD & IPD registration** with full demographics
- **Self check-in kiosk** for walk-in patients
- **Appointment scheduling** & calendar
- **Queue management** with token allocation
- **Queue display / status** boards
- **Queue TV** waiting-area screen
- **Bulk patient import** from lists/files
- **Handwritten-list capture** for legacy records
- **Patient lookup** & duplicate detection
- **Patient profile** with full history
- **Add / edit patient** & registration dialogs
- **Visit creation** & medical-info capture

02 OPD & IPD Operations

DAILY FLOW

Live operational dashboards that show who is in the hospital right now — and every step of each patient's journey from visit to discharge.

- **Today's OPD** dashboard with statistics cards
- **Today's IPD** dashboard & live census
- **Currently-admitted** patient board
- **OPD summary** landing & task selector
- **OPD / admission notes** per visit
- **Patient dashboard** & workflow visual
- **Patient overview** analytics
- **Patient journey logs** (timeline)
- **Activity log** across the visit
- **External requisition** create & track
- **Extension-days** tracking for stays
- **Discharged-patients** register

03 Wards, Beds & Accommodation

IN-PATIENT

Manage rooms and beds in real time, shift patients with a full audit trail, and post accommodation charges to the bill automatically.

- **Accommodation management** & allocation
- **Room management** with status & rates
- **Bed occupancy** visibility
- **Ward / room shifting** with audit trail
- **Conditional ward & room fields** by case
- **Accommodation charges** auto-posted to bill

Clinical care, nursing & the operating theatre

The clinical core — where doctors and nurses document care, and every clinical document a hospital issues is generated from live visit data.

04 Clinical, Nursing & Discharge

CARE TEAM

From the doctor's worklist to discharge — prescriptions, treatment sheets, nursing workflows, and auto-generated discharge documents.

- **Doctor view** — patient list & clinical actions
- **Treatment sheet** create, list & print
- **Nursing station** workflows
- **Prescriptions** capture & management
- **Medications** registry
- **Admission notes** (IPD & OPD)
- **Discharge workflow** panel
- **IPD discharge summary** + edit & print
- **Discharge summary** templates
- **Death certificate** generation
- **Gate pass** issue, print & security check
- **P2 / PVI forms** per visit

05 Operation Theatre & Procedures

OT

Schedule theatres, assign surgical teams, track consumables and implants, and capture diagnoses and complications — all linked to costing.

- **Operation theatre** scheduling & management
- **OT workflows** & resource allocation
- **OT inventory** & consumables
- **Cath Lab** module
- **CT / MRI module** & MRI order modal
- **Diagnoses registry** (ICD-style catalog)
- **Complications** registry & tracking
- **Surgeon / anaesthetist** assignment
- **Implant usage** linked to costing

Clinical documents generated automatically

Every clinical document is produced from live visit data — no re-typing, consistent formatting, instant print/PDF.

Discharge Summary

Treatment Sheet

Admission Notes

Death Certificate

Gate Pass

P2 / PVI Forms

A full Laboratory Information System

From order to validated report — sample tracking, configurable test catalogs, formula-driven panels, quality control, and patient delivery, including WhatsApp.

06a Orders & Sample Workflow

- **Lab dashboard** & daily workload
- **Lab order entry** tied to patient visit
- **Patient search** with visit context
- **Sample tracking** & barcode/sample IDs
- **Sample processing** stages & status
- **Home sample collection** requests
- **Phlebotomist dashboard** for collection

06b Test Configuration

- **Test catalog** & sub-specialty grouping
- **Lab test config manager** (ranges, units)
- **Form builder** for custom test forms
- **Panel manager** & nested sub-tests
- **Formula-driven** calculated results
- **Age/gender reference ranges**
- **Lab master** (admin-controlled)

06c Results & Reporting

- **Result entry** — simple & enhanced forms
- **Histopathology / cytology** entry
- **Serology** reporting
- **Lab trend charts** across visits
- **Lab report print formats**
- **Report delivery** to patients
- **WhatsApp report** send button

06d Quality & Control

- **Quality control** module
- **Database / system status** monitoring
- **Result validation** workflow
- **Test data initializer** & seeding
- **Reorder / re-test** handling
- **Audit trail** on result changes

Radiology / PACS and a complete pharmacy supply chain

A full RIS/PACS imaging workflow alongside a pharmacy that runs from prescription to purchase order — both feeding billing and stock automatically.

07 Radiology & Imaging (RIS / PACS)

- **Radiology dashboard** & management
- **Radiology orders** (standard & enhanced)
- **Radiology worklist** for technicians
- **Modality management** (X-ray, CT, MRI, USG)
- **PACS image viewer** & PACS integration
- **Radiology reporting** & result forms
- **Appointment scheduling** for imaging
- **X-ray tracking**
- **Radiation safety** records
- **Quality assurance** & analytics
- **Sub-speciality** configuration
- **Radiology master** catalog

08 Pharmacy & Supply Chain

- **Pharmacy dashboard** & KPIs
- **Pharmacy billing** & direct-sale bills
- **Edit / view sale** & return sales
- **Prescription queue** & management
- **Prescription notification** alerts
- **Drug interaction** panel
- **Medicine inventory** & items master
- **Batch & expiry** inventory tracking
- **Low-stock medicines** alerts
- **Stock management** & movement
- **Purchase orders** add / edit / list
- **Goods Received Note (GRN)**
- **Supplier master**
- **Return to vendor** & write-off
- **Internal transfers** & store requisition
- **Credit payments** & product purchase report

Imaging & pharmacy feed billing automatically

Every scan reported and every medicine dispensed posts to the patient's bill and the stock ledger in real time — closing the gap where revenue and inventory normally leak.

Billing, invoicing & corporate/TPA management

Every bill type a hospital needs — cash, credit, corporate, and scheme — with a structured submission-to-payment workflow.

09 Billing & Invoicing

- **Final bill** with full charge assembly
- **Edit final bill** & bill management
- **Detailed invoice** (itemised)
- **Discharge invoice**
- **Advance payment** capture & receipts
- **Yojna (scheme) bill**
- **Physiotherapy bill**
- **Corporate bill** & view bill
- **Day-wise bills** register
- **Old bills** history & reprint
- **No-deduction letter**
- **Financial summary** per visit

11 Corporate & TPA Management

- **Corporate master** with areas & detail
- **Corporate area mapping**
- **Intimation + bill submission**
- **Bill approval** workflow board
- **Payment-received** dialog & tracking
- **Bill aging statement**
- **Expected payment-date report**
- **Corporate bulk receipts** / payments
- **Advance statement report**
- **Daywise corporate** reconciliation
- **Outstanding & recovery** visibility
- **Post-dated & billwise** tracking

The bill workflow board

A Kanban-style board moves each corporate/TPA bill through intimation → submission → approval → payment, so the accounts team always knows what is pending, where, and for how long — and aging never surprises anyone.

Tally-grade accounting, built in

A complete double-entry accounting suite — not just billing. Vouchers, ledgers, statutory statements, bank reconciliation, GST, and a two-way Tally bridge.

10a Books & Vouchers

- **Voucher entry** & simple voucher creation
- **Voucher gap detection**
- **Chart of accounts** & ledger creation
- **Master creation / alteration**
- **Cash book** & day book
- **Day book report**
- **Account books** & ledger view
- **Daily payment allocation**

10b Statements & Analysis

- **Balance sheet**
- **Profit & loss**
- **Trial balance**
- **Cash flow & funds flow**
- **Ratio analysis**
- **Ledger & patient ledger statements**
- **Billwise details** & post-dated summary
- **Stock summary**

10c Banking & Statutory

- **Bank reconciliation** (incl. SGST)
- **Bankwise register** & banking
- **Cheque printing** & deposit slips
- **Daily reconciliation**
- **GST / SGST** transactions summary
- **IT transaction register** + reports
- **IT transaction** filters & summary
- **Purchase A/c ledger**

10d Tally Integration

- **Tally dashboard** & auto-sync
- **Bill sync** & voucher sync
- **Ledger / ledger-view** mapping
- **Cash book & bank book** sync
- **GST & stock items** sync
- **Tally reports**
- **Retry queue** for failed syncs
- **Field mapping** configuration

Accounting depth equivalent to a standalone finance package — meaning many hospitals can retire a separate accounting tool entirely.

Government schemes, referrals & B2B growth

India's major healthcare schemes built in at the rate-and-package level, plus a full marketing engine that ties referrals to revenue.

12 Government Scheme Engine

- **CGHS surgery** & CGHS surgery master
- **CGHS surgery fields** & package codes
- **PMJAY / MJPJAY master**
- **Ayushman Bharat** surgeons & rates
- **Ayushman consultants & anaesthetists**
- **ESIC surgeons**
- **Hope surgeons / consultants / anaesthetists**
- **Hope & Ayushman RMOs**
- **Mandatory service** rules
- **Clinical services** create & manage
- **Package-rate** auto-application
- **Scheme document** generation

13 Marketing, Referrals & B2B

- **Marketing dashboard** & performance overview
- **Marketing field tracker**
- **Marketing users** management
- **Marketing doctors** & doctor lists
- **Doctor visit** logging & visits list
- **Marketing camps** management
- **Marketing incentives** calculation
- **Referees / referral** management
- **Relationship manager** registry
- **Referee DOA payment** handling
- **B2B partner portal** + B2B login
- **Referral-to-revenue** attribution

Native support for India's major healthcare schemes

Scheme rates, package codes, and approval documents are built in — so claims are accurate the first time and rejections drop.

CGHS

PMJAY

MJPJAY

ESIC

Ayushman Bharat

Corporate / TPA

Cash & Credit

Master data, administration, reporting & integrations

The control layer that keeps every module consistent — central catalogs, role-based security, management reporting, and the channels that connect Adamrit to the outside world.

14 Master Data & Configuration

- **Lab master & radiology master**
- **Surgery (CGHS) master & implant master**
- **Diagnoses & complications** catalogs
- **Corporate master & location master**
- **Clinical & mandatory services**
- **Doctor / consultant / RMO panels**
- **Central master data** hub

15 Administration & Security

- **User management** & user accounts
- **Role-based access** control
- **Granular permissions** per feature
- **Staff attendance**
- **Activity & audit logs**
- **Security verification** screens
- **Multi-hospital** configuration & theming

16a Dashboards & Reports

- **Director dashboard** (revenue & KPIs)
- **Daily revenue report & entries**
- **Patient & clinical dashboards**
- **Reports center** (multi-report)
- **Aging, expected-payment, ledger reports**
- **Operational KPI** views
- **Export to Excel / PDF**

16b Integrations & Channels

- **Tally** two-way accounting sync
- **Payment QR** for instant collection
- **Telephony dashboard** & call logging
- **Conference call / tele-consult**
- **WhatsApp** report delivery
- **Patient portal** self-service
- **Bulk import & Excel** ingestion

Secure & accountable by design

Role-based logins, feature-level permissions, multi-hospital isolation, and complete activity logging mean every action is attributable and sensitive patient and financial data stays with the people authorised to see it.

What all of this means for your hospital

Software is only worth what it changes. Here is what changes the day Adamrit goes live.

Stop revenue leakage

Every chargeable service — pharmacy, lab, scan, implant, procedure, bed-day — is captured against the visit. Nothing is delivered without reaching the bill.

Faster discharges & collections

Bills assemble themselves from real activity, so patients leave sooner and payments arrive faster.

Fewer claim rejections

Built-in scheme package rates and documents mean CGHS, PMJAY, ESIC, and TPA claims go out correct the first time.

Retire separate accounting tools

Full double-entry books, statutory statements, GST, and Tally sync are inside the same system.

Decisions backed by live data

Directors see revenue, occupancy, and referral performance the moment it happens — not a month later.

Before & After

- ✓ Paper registers → **searchable digital records**
- ✓ Manual bill assembly → **automatic charge capture**
- ✓ Separate lab/pharmacy/accounts apps → **one system**
- ✓ Month-end surprises → **live revenue dashboard**
- ✓ Lost referrals → **tracked incentive payouts**
- ✓ Claim rework → **first-time-right submissions**
- ✓ Stock/expiry losses → **batch-level control**

Adopt at your pace

Modules switch on as you grow. Start with registration and billing, then add lab, pharmacy, accounting, and schemes — without changing systems.

— WHY ADAMRIT, NOT A GENERIC HMS

The difference that shows up in the accounts

CAPABILITY	TYPICAL HMS	ADAMRIT
Double-entry accounting	Bolt-on / external Tally only	Built in + two-way Tally sync
Government scheme rates	Manual entry each claim	CGHS / PMJAY / ESIC packages pre-loaded
Lab & radiology	Separate LIS/RIS licences	Full LIS + RIS/PACS included
Marketing & referrals	Spreadsheets	Field tracking → incentive → revenue
Multi-hospital	Separate installs	One login, per-unit theming

Choose your edition, go live in weeks

Start with what you need today and switch modules on as you grow — on a guided onboarding path that gets your team productive fast.

EDITION 01

Essential

For clinics & small hospitals getting off paper

- ✓ Registration, OPD & IPD
- ✓ Wards, beds & accommodation
- ✓ Billing & invoicing
- ✓ Advance & final bills
- ✓ Core reports & document print
- Lab / Radiology suite
- Full accounting & Tally
- Scheme & marketing engines

MOST POPULAR

EDITION 02

Professional

For multi-department hospitals running the full patient-to-bill cycle

- ✓ Everything in Essential
- ✓ Full Laboratory (LIS)
- ✓ Radiology & PACS
- ✓ Pharmacy & supply chain
- ✓ Clinical, nursing & OT
- ✓ Corporate / TPA workflow
- ✓ Dashboards & KPI reporting
- Tally-grade accounting suite

EDITION 03

Enterprise

For groups & scheme-heavy hospitals that want one system for everything

- ✓ Everything in Professional
- ✓ Double-entry accounting + Tally
- ✓ Government scheme engine
- ✓ Marketing, referrals & B2B portal
- ✓ Multi-hospital & theming
- ✓ Telephony & WhatsApp channels
- ✓ Advanced audit & security
- ✓ Priority support & onboarding

Module composition is flexible — editions are a starting point and can be tailored to your hospital's exact requirement.

A guided path to go-live

“

Billing that used to take our counter an hour at discharge is now ready the moment the doctor signs off. Beds free up faster and nothing slips through.

[Hospital Administrator] · [Hospital name, city]

“

Our scheme claims used to bounce on pricing. With packages built in, submissions go out right the first time and our recovery cycle is shorter.

[Finance Head] · [Hospital name, city]

Quote cards above are placeholders — ready to drop in your real customer references before sharing.

Modern, secure, and ready to scale

Cloud-Based

100% web-based. Any browser, any device, any branch — no servers to babysit.

Real-Time

Live data sync across departments. What the lab enters, billing sees instantly.

Multi-Hospital

Configurable per unit, with feature toggles and brand themes for each.

Role Security

Granular permissions, secure logins, full audit trails on every action.

Integrations

Tally, payment QR, telephony, WhatsApp, and bulk import built in.

Documents

One-click PDF/print for every bill, report, summary, and certificate.

Engineered on a proven, enterprise-grade stack

A responsive React front end, a secure cloud database backend, and built-in document/PDF generation deliver speed, reliability, and a clean experience across desktops, tablets, reception kiosks, and waiting-room TV displays alike.

See Adamrit run your hospital

Book a live walkthrough on your own workflows — registration to final bill, scheme claim to director dashboard, purchase order to balance sheet. See exactly how much time, money, and effort your hospital reclaims.
